

STARSHIP OPERATIONS

one ship, one crew — everyone acts, every round

FFG STAR WARS · PLAYER REFERENCE

ONE PILOT everyone else takes a crew role — swap roles freely between rounds. Nobody sits out.	YOUR SLOT, AS NORMAL 1 Action + 1 Maneuver, spent through the ship.	THE SHIP PAYS TOO the pilot's 2nd flying maneuver costs the SHIP 2 system strain (2/round cap).	TWO TRACKS hull trauma is damage; system strain is what you spend. Past either threshold, the ship stops cooperating.
--	---	---	---

◆ PILOT — MANEUVERS (NO ROLL)

MANEUVER	LIMITS	EFFECT
Fly	—	Move (see Speed & Range).
Accelerate / Decelerate	—	Speed ±1 (0 to ship's max).
Evasive Maneuvers	Sil ≤ 4, Speed 3+	Upgrade difficulty of <i>all</i> attacks on you AND by you (■ → ■), until your next turn.
Stay on Target	Sil ≤ 4, Speed 3+	Upgrade your crew's combat checks (■ → ■) — and attackers' too. Until your next turn.
Angle Deflectors	needs Defense	Move 1 point of defense between zones; stays put.

Pilot — actions

- **Gain the Advantage** (Close range): Piloting — faster than them ■ · same speed ■■ · 1 slower ■■■ · 2+ slower ■■■■. Win: ignore all Evasive penalties and *you pick the defense zone your shots hit*, until end of next round. They shake it only with their own Gain the Advantage, +1 difficulty per time it's already been won.
- **Punch It:** jump straight to max Speed — 1 system strain per point gained.
- **Big ships** (Sil 5+): no Evasive Maneuvers, no dogfighting — angle shields and shoot back.

◆ EVERYONE ELSE — PICK A STATION

ROLE	CHECK	EFFECT
Co-pilot	Average Piloting	Each Success downgrades the pilot's next check (■ → ■).
Gunner	Gunnery	Fire a weapon (difficulty: silhouette box). Aim first for ■.
Damage control	Mechanics — ■ at ≤ half, ■■ over half, ■■■ past threshold	Recover hull trauma OR system strain = Successes . Hull repair: once per PC per fight; strain: retry freely.
Boost shields	Hard Mechanics	Ship takes 1 strain; +1 defense to one zone until your next turn (+1 round per extra Success).
Scan the enemy	Hard Perception	Learn weapons, mods, thresholds; Adv for current totals.
Jamming	Average Computers	Their comms need an Average Computers check to work (+1 difficulty per 2 extra Succ ; +1 ship per Adv).
Slice their systems	Hard Computers	Each Success strips a defense zone; Adv = system strain; TRIUMPH = one weapon dead a round.

Spoof missiles	Avg Computers / Hard Vigilance	Guided attacks on you upgrade difficulty once until your next turn (+1 per extra Adv).
Plot course	Astrogation / Perception	Each Success pulls one ■ (terrain, debris) off the pilot's next check.
Fire discipline	Hard Leadership / Discipline	Next crew member's combat check gains ■ (+1 more crew per 2 extra Succ).
Anything else	normal skills	Patch a wound, fight a boarder, work the airlock.

◆ SHOOTING — SIZE DECIDES, NOT RANGE

TARGET VS YOUR SHIP	DIFFICULTY
2+ silhouettes bigger	■
Within 1 either way	■■
2+ silhouettes smaller	■■■

- +■ per point of defense in the zone you hit. Small targets (Sil 1–4) pick their own zone; Sil 5+ — the firing arc decides.
- Weapons can't fire past their listed range band (Close → Extreme).
- **Critical hit:** **Advantage** = weapon's Crit rating, or a **TRIUMPH** — d100 on the vehicle table, +10 per existing crit.

◆ TAKING HITS

- **Hull trauma** = damage – Armor. Past the threshold: crippled + an immediate critical hit.
- **System strain** (ion hits, Punch It, extra maneuvers, shields): past the threshold — dead in space until repaired below it.
- **Handling** = ■ (positive) or ■ (negative) per point, on every Piloting check.

◆ SPEED & RANGE

- Speed 0 = parked target. Evasive needs Speed 3+.
- Band changes cost maneuvers by speed: Speed 1 — Close ↔ Short in 2 · Speed 2–4 — Close ↔ Short in 1, Short ↔ Medium in 2 · Speed 5–6 — Close ↔ Medium in 1.
- Rule of thumb: the faster ship dictates the chase.

◆ COMMON LIGHT FREIGHTERS — QUICK STATS

HULL	SIL	SPD	HAND	DEF	ARM	HT	SS
Wayfarer-class	5	3	–2	1/1/1/2	4	32	20
Ghtroc 720	4	3	–1	1/1	5	28	15
YT-1300	4	3	–1	1/1	3	22	15
