

1 • DID IT WORK?

Successes minus **Failures**. Ties fail. Nothing below can change this answer.

2 • WHAT ELSE?

Advantage minus **Threat** — a separate currency. It never flips success or failure. Spend it below.

3 • THE BIG ONES

TRIUMPH (+1 Success) and **DESPAIR** (+1 Failure): their *effects* always fire, and never cancel each other.

◆ IN COMBAT — ADVANTAGE & TRIUMPH

COST	EFFECT — ANNOUNCE IT; THE GM NARRATES
1 Adv	Recover 1 strain (repeatable).
1 Adv	Add  to the next allied character's check.
1 Adv	Notice one important thing — the door controls, the weak seam, the catwalk above.
1 Adv	Activate a weapon quality with listed cost 1.
2 Adv	One immediate free maneuver (2-per-turn cap still holds).
2 Adv	Add  to a targeted character's next check.
2 Adv	Activate a weapon quality (2 is the default cost).
3 Adv	Negate the target's defensive bonuses (cover, gear, stance) until end of round.
3 Adv	Ignore penalizing environment (weather, zero-g) until end of your next turn.
3 Adv	Force a significant drawback — they drop a weapon; or (damaging hit, GM's nod) disable gear instead of dealing the damage.
Adv = Crit rating	On a hit that wounds past soak: Critical Injury . Extra activations: +10 each to the roll.
TRIUMPH	Any option above, whatever its cost.
TRIUMPH	Critical Injury on a damaging hit, regardless of Crit rating.
TRIUMPH	Activate any weapon quality, regardless of cost.
TRIUMPH	Upgrade the target's next check's difficulty ( → ), or an ally's ability ( → ) — yourself included.
TRIUMPH	Do something scene-shaping: shoot the blast-door controls, collapse the catwalk, spot the way out.
2 TRIUMPH	On a damaging hit, destroy a piece of the target's equipment outright.

One crit per hit. Every further activation adds +10 to that one Critical roll.

◆ THE MIRROR — THREAT & DESPAIR

COST	THE GM SPENDS THESE ON YOU
1 Thr	Suffer 1 strain (repeatable).
1 Thr	Lose a prior maneuver's benefit (your aim, your stance) until retaken.
2 Thr	An opponent takes one immediate free maneuver.
2 Thr	 to an enemy's next check, or  to yours or an ally's.
3 Thr	Fall prone.
3 Thr	Upgrade the difficulty of an ally's next check ( → ) — yourself included.
DESPAIR	Any option above, whatever its cost.
DESPAIR	Out of ammo — the weapon is dry for the rest of the encounter.
DESPAIR	Your weapon or tool is damaged one step (minor → moderate → major).
DESPAIR	Something scene-shaping goes wrong: the reinforcements arrive, the bridge gives way, the contact was a plant.

Threat isn't a second failure. A success with Threat still did the job — it just cost you something.

◆ OUT OF COMBAT — SUGGEST THESE

- **Slicing:** no trace in the log · one extra file · the backdoor stays open.
 - **Mechanics:** the repair over-performs · done faster · a spare part salvaged.
 - **Astrogration:** hours shaved · a landmark for your charts · arrive positioned right.
 - **Negotiation:** better price or a favor · learn what they really value · door stays open.
 - **Charm / Deception:** they repeat your version · you read what they hide · the lie survives one follow-up.
 - **Stealth:** an exit route found · something overheard · the guards argue about what they saw.
- 1–2 Adv buys something small; 3+, or a **TRIUMPH**, buys what the scene turns on. Failed with Advantage? Same menu, smaller portions — it didn't work, *and* you learned, kept cover, or set up the next try.

◆ ETIQUETTE

- **You propose, the GM disposes.** Plain words: "two Advantage — free maneuver to duck behind the crates?" Expect "yes, and."
 - **Spend promptly.** A decent spend now beats a perfect one after two minutes of menu-reading. Strain recovery is always there.
 - **Use it or lose it.** Advantage doesn't bank. Shrug, and the GM spends it as scene color — the dice refusing to be boring.
- When in doubt:** recover strain, boost a friend, or notice something. Never wrong.

◆ DESTINY POINTS — THE TABLE'S SHARED POOL

- **Session start:** each player rolls . Light pips go to the **light side** (players') pool, dark pips to the **dark side** (GM's). It resets every session.
- **Spending flips the token.** A light point you spend becomes a dark point the GM can use — and vice versa. Every spend feeds the other side.
- **Upgrade your check:** one  →  on your own roll, or one  →  on an NPC's. Once per check per side — declare it *before* rolling.
- **Story edit:** a small, plausible fact in your favor — "there's a spare power cell in my kit," "I know a guy on this station." The GM can say no.
- **Some talents** and Force users' off-side pips (below) are paid with a flip.

The GM spends dark points the same way against you. A full dark pool is your cue to spend.

◆ FORCE POINTS — READING THE WHITE DIE

- **Force rating** = how many  you roll for a Force power. No blank faces: every die gives light pips (white), dark pips (black), or both.
- **Pips of your side** are Force Points. Spend them on the power's basic effect and any upgrades you've bought; unspent ones are lost.
- **Pips of the other side** can still be used — at a price. A light-sider using dark pips flips a Destiny Point (light→dark) and suffers **1 strain per dark pip used**. Dark-siders mirror this with light pips.
- **Not enough pips?** The power just doesn't happen this turn. Committed dice stay out of your pool until released.
